

SGN Fruit Tree Varieties 2021

Fuji Apple

Semi-dwarf, 12'-14' tall x 12' wide - Fuji ripens late season and has medium size fruit with large yields. It pollinates well with Gala, Golden Delicious, Honeycrisp, Topaz and Winecrisp. Flowering Group 3-4.

Topaz Apple

Medium to semi dwarf – Topaz has superior disease resistance with medium-large apples. Late May pruning helps fruit set. Flowering Group 3.

Honeycrisp Apple

Height and spread are variable – Honeycrisp is an exceptional apple that is crisp, sweet, and well balanced. It is self-fertile in Flowering Group 4.

Winecrisp Apple

Height and spread are variable – Winecrisp was bred at University of Illinois. It has cream colored flesh that is juicy with full spicy flavors with a good storage life. Honeycrisp, Topaz and Fuji make good pollinators. Flowering Group 3-4.

State Fair Apple

Height and spread are variable – State Fair Apple has a great texture that is lively and tart. It is a good all-purpose apple. Winecrisp and Topaz are good pollinators. Flowering Group 2.

Bartlett Pear

15' x 12' – Bartlett Pear is a juicy flavorful pear that is good for canning or eating fresh. It pollinates with Anjou or Bosc.

Bosc Pear

15' x 12' – Bosc Pear is a smooth textured pear that is tender and juicy. It is great for canning or for fresh use. Bartlett Pear is a good pollinator for it.

D'Anjou Pear

15' x 10' – D'Anjou Pear is a multi-purpose pear good for canning, freezing or fresh eating. Bartlett Pear is a good pollinator for it.

Redhaven Peach

20' x 12' – Redhaven Peach is an early peach with red and golden yellow color and uniform fruit. It is self-pollinating but higher yielding with other peach nearby.

North Star Cherry

10' x 10' – North Star Cherry has large fruit that is excellent in quality. It is on the tart side making it great for pies. This variety is self-pollinating.

Montmorency Cherry

12-15' – Montmorency is a tart cherry ripening in June. This cold hardy variety is self-fertile.
